

WiFi everywhere.

This will be the go, and NBN provides it in the country for rural folks with Telstra providing it in towns.

Why Fry the brains of us all - because it suits the EM powers of the state - and after then comes the Smart Meter....

## **Telstra is Launching the Largest WiFi Network in Australia**

**OLIVIA CHANG JUN 27 2015**

<http://www.businessinsider.com.au/telstra-is-launching-the-largest-wifi-network-in-australia-2015-6/>

Telstra's WiFi network is launching this Tuesday in what is expected to be Australia's largest WiFi network with over 8,000 hotspots across the nation.

Dubbed as "Telstra Air", the service will be offered free to Telstra's two million home broadband users who can use their home data allocation with non-customers able to buy day passes and access the service through Spain-based partner, Fon.

"As of Tuesday we will have a differentiator [in Telstra Air] that others don't have, which we are very excited about," Telstra's Group managing director of consumer and products, Karsten Wildberger, told the AFR. The \$100 five-year plan will effectively see a big shift from costly data usage on the mobile network through to direct download and upload on a WiFi network.

Under the move, wireless connectivity will be boosted in popular areas such as shopping centres, cafes, train stations and sporting stadiums. Telstra Air will initially be available across 250 cities and towns in Australia with promises of "thousands" more individual hotspots in high-traffic areas.

"We want Australia to be a truly connected country and as part of our plan, we are keen to work in partnership with local councils and enterprises to grow our Wi-Fi network in Australia's largest cities and regional centres," said former Telstra CEO David Thodey.

**The new network will also see a global footprint of 15 million international hotspots in countries such as Germany, Poland, Britain, France and Japan.**

# Health risks of Wi-Fi

## Cellular/fetal development

Exposure to non-thermal radio frequency radiation from Wi-Fi can disrupt normal cellular development and cell growth.

## Fertility

Wi-Fi have been known to affect male and female fertility with sperm movement being reduced and affecting the quality of women's eggs.

## Brain activity

Woman exposed to 2.5 GHz Wi-Fi for 45 minutes have a drastic change in their brain activity and energy levels.

## Cardiac stress

Cardiac stress can be caused by Wi-Fi radiation as it increases the heart rate similar to someone under stress. It can also increase the cancer tumours.

## Insomnia

Sleep deprivation is one of the main problems if you sleep near a phone within a house that has Wi-Fi.

## How to minimise health risks of Wi-Fi:

Limit use of Wi-Fi or switch off Wi-Fi devices when it's not being used.
